jamescarney3
jamescarney3

Process-oriented software engineer with 10+ years of experience building and scaling complex, full-stack applications using modern stacks (TypeScript, React, Ember, Rails). Proven ability to drive architectural improvements, champion and refine best practices, and deliver features in fast-paced environments. Skilled at translating product vision into technical planning and execution. Prolific tinkerer.

CORE TECHNOLOGIES

Languages: TypeScript, JavaScript, Python, Ruby
Frontend: React, Ember, Redux, TanStack Query, Sass, Tailwind, CSS Modules
Backend/DevOps: Ruby on Rails, Node, SQL, GraphQL, JSON:API, Docker

PROFESSIONAL EXPERIENCE

Tuition.io *Software Engineer*

September 2023 - October 2025
Remote

- Planned and developed internal and client-facing features spanning the full platform stack
- Championed extension of internal UI component library to standardize component design and reduce development time
- Collaborated with product org to define attestable project specs and align engineering scope and business goals

Spaceback, Inc *Software Engineer*

May 2021 - February 2023
Remote

- Extended and maintained template-based programmatic display ad generation functionality
- Developed and integrated automated video ad generation functionality
- Planned and executed frontend feature migration to use React SPA architecture
- Planned and introduced Node.js build and testing tools for frontend code
- Rebuilt critical Chrome extension to comply with Chrome Manifest V3 standard and ensure feature continutity
- Proposed and moderated bi-weekly engineering book club to foster technical knowledge sharing

Publicis Sapient *Senior Associate | Experience Technology*

August 2019 - April 2021
New York, NY & Remote

Goldman Sachs | FAST Analytics

- Developed internal bond trading data intelligence & visualization tool with client engineering team
- Optimized application state management with OpenFin's inter-application message bus
- Researched, documented, and implemented sustainable frontend architecture

Goldman Sachs | Transaction Banking

- Developed payment system monitoring dashboard tool with client engineering team
- Standardized application frontend React & Redux architecture to improve scalability
- Standardized frontend test suite to raise coverage and clarify reporting
- Streamlined API interface standardization and documentation efforts to facilitate intra-stack integration
- Mentored and delegated deliverables to remote team members and coordinated cross-timezone workflows

SELECTED PROJECTS

Gmail Inbox Manager https://github.com/jamescarney3/mail-reaper-9k

Technology Stack: TypeScript, Webpack, Google Apps Script, shell scripting
Developed a tool to periodically automatically archive and label emails in a Gmail inbox per a user defined schedule, and generate a digest report of successful transactions per execution. Main script is compiled from TypeScript with Webpack, executes in the Google Apps Script runtime, and deploys with clasp. Email matching and processing rules are defined in Google Sheets and updateable between deployments. Project is open source and can be installed via shell script.

Automatic Mist Irrigator https://github.com/jamescarney3/irrigator

Technology Stack: Python, Flask, RPi.GPIO, shell scripting, various tubes and wires
Designed and constructed a mist irrigation system for indoor gardening using procured and found plumbing and electronic hardware. Main pump and valve are controlled by Python scripts via a Raspberry Pi GPIO board, and system is administered with a small Flask web app accessible over home LAN.

EDUCATION

Bowdoin College *B.A. in Philosophy and Economics*

September 2007 - May 2011
Brunswick, ME
